

## **NETANALYSIS™** *your key to a cache of evidence*

### **NetAnalysis™ Foundation Course and Product Certification**

The forensic examination and analysis of user activity on a computer system can be the pivotal point of any criminal or civil case.

With the increase in the use of computers by paedophiles and other criminals who commit crime on the Internet, it is vital for digital forensics investigators to be able to extract this data, analyse it quickly and present the evidence in an understandable format.

#### **Course Aims and Objectives**

The NetAnalysis™ foundation course is a 2 day, instructor-led, web browser forensics course designed to provide the student with the necessary skills and knowledge to utilise NetAnalysis™ and HstEx™ effectively within a forensic investigation.

This course will equip investigators with the knowledge to recover web browser data and analyse it utilising custom designed SQL searching and filtering. Students will be taught how to bookmark and report the identified evidence as well as providing an audit trail of their actions.

The full functionality of NetAnalysis™ and HstEx™ will be explored using real life scenarios, case studies and hands-on exercises.

We will provide an in-depth insight into time zone settings, involving detailed analysis and interpretation. We will explain the potential pit falls that lie in wait for the unwary forensic investigator.

We will demonstrate and discuss recovering deleted data with HstEx™ and review common forensic recovery scenarios.

NetAnalysis™ is your key to a cache of evidence and this is demonstrated by the successful reconstruction of web pages from the web browser cache. Students will learn how to rebuild web pages and extract files from the cache as well as techniques for presenting this data as evidence.

#### **Who Should Attend**

This course is designed for both corporate and law enforcement forensic investigators who use NetAnalysis™ and HstEx™ for the recovery of web browser evidence.

It is suitable for individuals with all levels of experience and is focused towards those who wish to learn how to realise the full potential of our software.

Full details of course pricing, location and availability can be found on our web site.
